29th EAHM Congress, Budapest 2022
Hospital Visits

Wednesday, 2 March 2022					
9:00	13:00	Pre-Congress Visit #1 50 PAX	Pre-Congress Visit #2	Pre-Congress Visit #3 2 groups @ 30 PAX each	Pre-Congress Visit #4 50 PAX
		<p>Duna Medical Center (DMC) After reaching its full capacity, Duna Medical Center offers a wide range of services in the field of surgical and interventional medicine, complemented by compensatory outpatient care. Patient safety is also uniquely served by intensive care and premature birth care in private health care.</p>	<p>National Institute of Medical Rehabilitation The institute's predecessor, the home of lung disease soldiers, opened in 1918. The area, also known as the lungs of Budapest, with rich fauna, plenty of sunlight, and good climatic conditions has provided a good chance for patients awaiting recovery. In the 1950s the profile of the institute gradually changed, and the it became a recognized center of locomotor rehabilitation and specialist training. In 2000 the foundation stone of the new building was laid. Doctors continue complex rehabilitation of our patients with well-trained team members in a beautiful environment, in a 21st-century building.</p>	<p>Hospital in the Rock Hospital in the Rock was built in a natural cave system under the Castle Hill. During WWII a shelter and a first-aid place was built in the caves, that was expanded into the Hospital in the Rock. It had three wards and a modern operating theatre. During the siege of Budapest in 1944-45 all 94 beds of the hospital were constantly filled, and patients were also laid in the halls and chambers of the surrounding cave system. HitR was closed in July 1945 but re-opened in 1956 to treat civilians and soldiers alike. Between 1958-1962 the Hospital in the Rock was converted into a nuclear bunker. The safety-by-pass corridor was built, as well as a new ventilation system equipped with a special gas filter, and also a water supply system attached to the River Danube. It was never formally decommissioned, and the Civil Defence Forces used it as a store. In 2007 the facility was renovated. In 2010, the Ministry of Culture and Education classified it as a museum collection of public interest and now it functions as a national collection point for its specialist area.</p>	<p>Premier Med Healthcare Center Premier Med Health Center is special in the Central European region with its unique tools and expertise for thyroid nodular patients and for those who live with varicose vein problems. It provides - RadioFrequency Ablation therapy to treat benign thyroid nodules (strumas); - Endovenous Radiofrequency Ablation to help those with varicose vein problems; - Cryoablation therapy (freezing), allowing patients to have their fibroadenomas treated effectively without being cut or having to go under general anaesthetic.</p>
